Education for an Open Architecture

BALL STATE UNIVERSITY.

CIB

EDU*OPEN

An International Conference Hosted by:
Ball State University
College of Architecture and Planning +
CIB W104 Open Building Implementation

October 19-22, 2008
Ball State University, Muncie, IN, USA

This is a forum for environmental design educators, students, and practitioners from around the world concerned for the future of architectural education. It has a specific focus: **the design of open-ended yet sustainable physical environments.**

The conference / workshop will have paper sessions, exhibits of student and professional work focused on the conference theme, and selected real-time DESIGN EXERCISES that will serve as a platform for discussions.

The conference also invites students from around the world to participate in an **international student competition**. The competition provides a unique opportunity for future architects to challenge conventional approaches to design, and to investigate and develop new concepts for an open and sustainable architecture for the 21st century.

For conference and competition information and dealines, please visit:
